ZEBRA NAME BADGE PAPER GUIDE

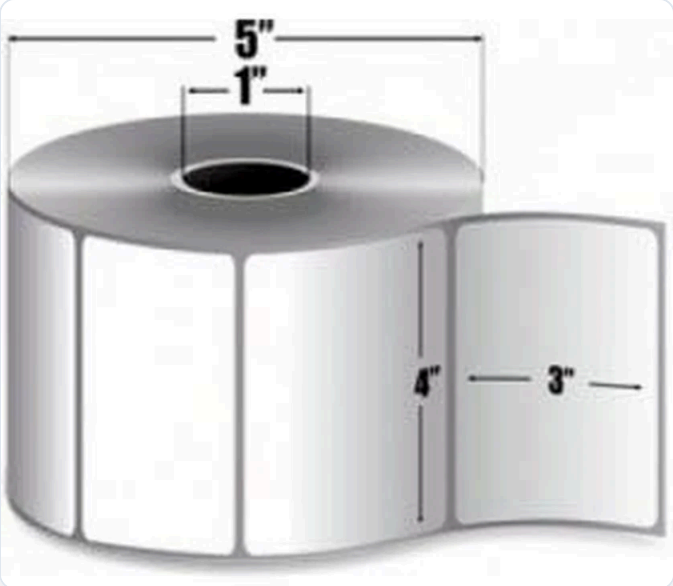
Third-party name badge paper for Zebra printers

Choose 2 Rent

Please note: Choose 2 Rent does not guarantee third-party media bought outside our preferred vendors or internal suppliers.

- **Roll:** wound on a core 0.5" to 1.5" across, with a roll size of up to 2.6" to 5.0" across.

  The name badge paper can be up to 4" wide, and from 2" to 12" long.



- **Fanfold:** folded in a zigzag pattern.

  The name badge paper can be up to 4" wide, and from 2" to 12" long.

Tip: *ask your software provider which name badge paper sizes their system accepts.*

- **Direct thermal paper** is a fine paper coated on its surface with a dye mixture.

  Heat from the print head prints the design onto the name badge.

  Only one side is coated. The other side is blank and carries the sensing marks.

- **Thermal transfer printing** is available on request.

  A thermal transfer ribbon prints images in black onto the blank side of the name badge stock.

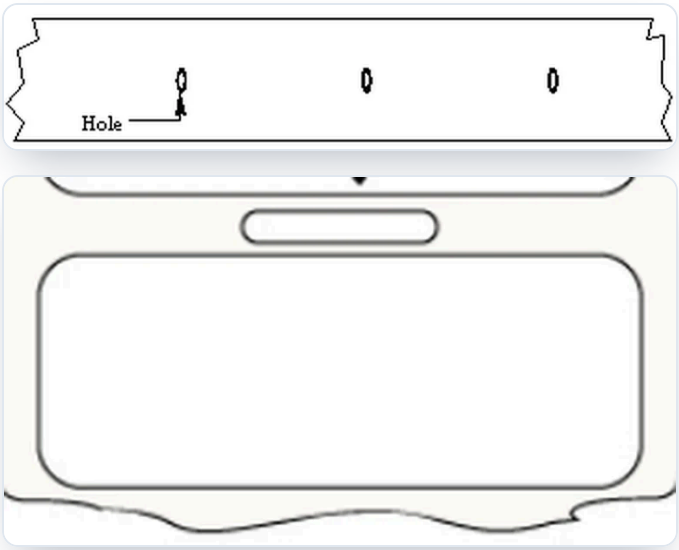
Media sensing

- Each printer calibrates to different sizes of name badge paper.

  A lens in the printer looks for a black mark or a gap/notch.

  That tells the printer the paper size, and where each name badge starts and ends.

- **Gap/Notch sensing:** a gap, hole or notch between each name badge shows where each one prints.



- **Mark sensing:** a reflective black line shows where each name badge prints.

  The timing mark should run the full width of the name badge, and be 1/8" high.
